Introduction

Report Criteria

In October 2008, Public Act 295 of 2008 (PA 295 or the Act) was signed into law.

Section 95(2)(e) of the Act requires that by November 30, 2009, and each year thereafter, the Michigan Public Service Commission (MPSC or Commission) is to submit to the standing committees of the Senate and House of Representatives with primary responsibility for energy and environmental issues a report on the Commission's effort to implement energy conservation and energy efficiency programs or measures. The report may include any recommendations of the Commission for energy conservation legislation.

Background: PA 295 Requirements, Energy Optimization Plans, and Commission Implementation

Subpart B of PA 295 requires providers of electric or natural gas service to establish Energy Optimization (EO) programs for their customers. Annual energy savings targets for providers are specified in the Act, ramping up to one percent of annual retail sales for electric providers and 0.75 percent of annual retail sales for natural gas providers in 2012. Providers are required to file plans with the Commission detailing the programs they will utilize to meet their annual energy savings goals. Regulated providers are allowed to fund their programs through Commission-approved EO surcharges, but must demonstrate that the program costs are reasonable and prudent and that they are cost-effective according to a standardized cost-benefit analysis specified in the Act.

In compliance with PA 295, on December 4, 2008, the Commission issued a temporary order in MPSC Case No. U-15800 to begin to implement the provisions of the Act. The temporary order provided EO plan filing guidelines and resolved implementation issues for EO and renewable energy

¹ Energy providers subject to the provisions of the Act exclude alternative electric suppliers and natural gas marketers, since retail choice customers may participate in their local distribution utility programs.

plans. EO plan submittals were required from all gas and electric utilities in Michigan. In 2010, the Commission approved Energy Optimization plans for 15 investor-owned utilities (IOUs), 10 electric cooperatives, and 41 municipal electric utilities, for a total of 66 Energy Optimization Plans. In 2011 there were 14 IOUs, 10 electric cooperatives, and 41 municipal electric utilities that filed EO plans, for a total of 65 Energy Optimization Plans. In 2011 there was one less IOU because Cloverland Electric Cooperative bought Edison Sault Electric Company. A listing of case numbers, company names, and current plan status can be found in *Appendix A-1*.

For the 2012 through 2015 plans, 53 of the 65 utilities in Michigan are formally coordinating the design and implementation of their EO programs in order to reduce administrative costs, create consistency among programs, and to improve customer and contractor understanding of program offerings and administrative procedures. The remaining 12 utilities are independently administering their own programs. A chart delineating these EO joint coordination groups, and their respective utility partners, can be found in *Appendix A-2*.

Program Offerings

Beginning November 30, 2009, all natural gas and electric utility customers in Michigan were able to participate in specific energy efficiency programs offered by their local utility. New programs became available in 2010 and 2011 and utilities will continue to phase in the implementation of additional programs and expand existing programs over the next several years. In general, individual programs are divided into two broad categories: residential and commercial/industrial. Residential programs consist of five categories: lighting (compact fluorescent), heating ventilating and air conditioning (HVAC), weatherization, energy education, and pilot programs. Commercial/industrial programs consist of prescriptive and custom incentive programs, energy education, and pilot programs. Prescriptive programs provide rebates for specific equipment replacement such as lighting, boilers,

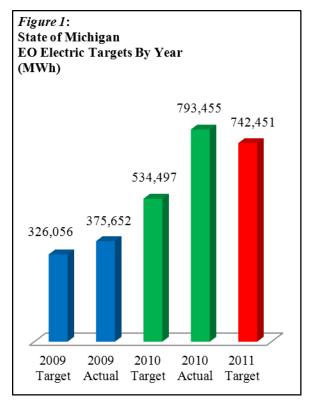

pumps, compressors, etc. Custom programs generally provide a rebate per kilowatt hours (kWh) electricity savings or per million cubic feet (Mcf) natural gas savings for a comprehensive system or industrial process improvement.

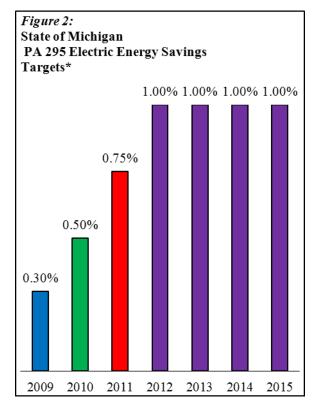

Specific program offerings for years 2009-2011 and implementation dates listed by utility can be found in *Appendix B*.

Energy Savings Targets

Section 77 of PA 295 provides annual energy savings targets that electric and natural gas utilities are required to meet. The minimum savings targets are based upon a percentage of calendar-year retail sales for each utility. These energy savings targets progressively increase over a four-year period from 2009-12 before leveling off in future years.

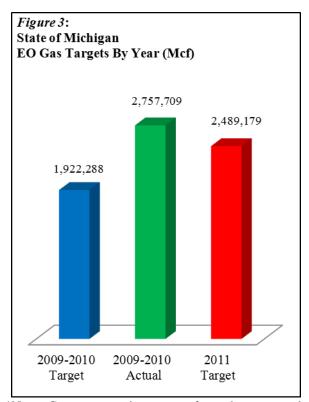

In 2010, EO program savings achieved for electric utilities were 148 percent of the target of 0.50 percent of retail sales as set forth in Section 77 of the Act. In 2010, the electric IOUs achieved 153 percent of their savings targets, while the municipal electric utilities reached 113 percent of their savings targets and the electric cooperatives met 110 percent of their targets. Ninety-one percent of the total statewide electric savings targets were achieved by regulated IOUs, while three percent of the total was met by electric cooperatives and the remaining six percent by municipal electric utilities. For 2011, the statewide PA 295 electric target of 0.75 percent of sales is projected to be 742,451 Megawatt hours (MWh). *Figure 1* shows electric savings targets for 2009 – 2011 and *Figure 2* describes the multiplier for determining yearly electric savings.

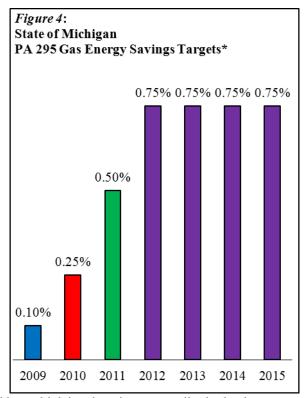

*Note: Electric energy savings targets for each year are calculated by multiplying the prior year sales by the percentage in the above chart for that year.

The 2010 EO program savings achieved for natural gas utilities were 143 percent of the target as set forth in Section 77 of the Act. Consumers Energy gas division achieved 126 percent of its savings target and Michigan Consolidated Gas Company (MichCon) achieved 196 percent of its savings target. The remaining gas companies cumulatively achieved 123 percent of their savings target. For 2011, the statewide PA 295 gas target of 0.50 percent of sales is projected to be 2,489,179 Mcf. *Figure 3* shows gas savings targets for 2009 – 2011 and *Figure 4* describes the multiplier for determining yearly gas savings targets.

*Note: Gas energy savings targets for each year are calculated by multiplying the prior year retail sales by the percentage in the above chart for that year.

For a detailed spreadsheet of energy savings target information by utility please *see*Appendix C-1 and C-2.

EO Surcharges and Program Funding

Section 71 of PA 295 requires utilities that file Energy Optimization plans with the Commission to specify necessary funding levels for the activities being proposed. Commission-regulated utilities are able to cover their EO program expenses through a customer surcharge approved by the Commission. Under Section 89, surcharges adopted by the Commission are assessed on an energy usage basis for natural gas and residential electric customers. Commercial and industrial electric customers are assessed a fixed charge.

Section 73 of PA 295 requires the Commission to ensure that costs being recovered through surcharges are reasonable and prudent, and that the programs are cost-effective as

demonstrated by a Utility System Resource Cost Test (USRCT) specified in Section 13 of the Act. For additional detail on surcharges for all customer classes and estimates of typical residential surcharges, *see Appendix D-1 and D-2*.

Aggregate statewide funding for Energy Optimization programs in calendar year 2009 was \$67,030,258. For calendar year 2010, the statewide funding for Energy Optimization programs was \$135,369,598. For calendar year 2011, the statewide EO budget is expected to be \$208,141,474. For detailed spending information by utility please *see Appendix D-3*.

Avoided Costs

In 2010, EO program expenditures of \$113 million by the largest combined gas and electric utilities in the state resulted in lifecycle savings to customers of \$554 million.²

This means that for every dollar spent on EO programs in 2010 customers should realize benefits of \$4.88. The benefits will flow through to customers over the mean lifecycle of all efficiency projects implemented by customers during the program year.³ The benefits are in the form of utility avoided costs for production of electricity, or purchase of natural gas, which would otherwise be recovered in utility rates. Over the five-year period from 2011-2015, the cumulative benefits to customers are expected to be in excess of \$2.5 billion.

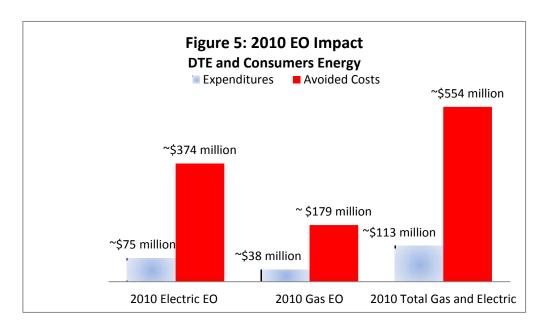

The calculation of avoided costs is based upon the ratio of benefits to program costs known as the USRCT. This is a nationally recognized standard of economic measurement that PA 295 requires to be reported by EO providers, and is based upon input data that is reviewed and certified by an independent third-party evaluation contractor.

6

² This data was provided by DTE Energy (Detroit Edison and MichCon) and Consumers Energy gas and electric, which represent approximately 90 percent of utility customers in Michigan.

³ For program year 2010, the mean lifecycle was calculated to be 9.6 years.

The EO program will result in the retention of hundreds of millions of dollars in fuel costs that would have been exported to other states in order to import energy to Michigan. Keeping these dollars in state helps to create jobs for the installation of energy efficiency measures by skilled contractors, energy efficiency audits, product sales, and other associated work. In addition, the benefits flowing to Michigan utility customers via the EO program should help minimize the debt burden of consumers, reduce utility uncollectible expenses, and strengthen the competitive position of Michigan businesses. *Figure 5* below shows the avoided costs for EO investments for DTE Energy (Detroit Edison and MichCon) and Consumers Energy gas and electric.

Efficiency United: State Selected Administrator

Section 91 of PA 295 created an option for electric and natural gas providers to offer energy optimization services through a program administrator selected by the Commission. Section 91(6) requires the administrator to be a "qualified nonprofit organization" selected through a competitive bid

process. To fund the program, which has been named Efficiency United, the administrator is paid directly by the participating providers using funds collected from customers.

The Michigan Community Action Agency Association (MCAAA) was awarded the Efficiency United contract on August 10, 2009, following the required bid process. MCAAA is a membership organization of 30 local community action agencies covering the entire state of Michigan and has extensive experience in the provision of energy efficiency services. MCAAA is working in cooperation with its primary implementation contractor, CLEAResult Consulting Great Lakes, and other subcontractors in the design, implementation, and administration of PA 295 energy optimization programs. The contract period is through December 31, 2011, with up to four optional, one-year extensions. The Commission expects the contract to be extended for the 2012 program year and future extensions will continue to be at its discretion.

Efficiency United (EU) energy optimization programs were launched for customers of participating providers in December 2009. Services and offerings are similar to, and coordinated with, those of other providers. Although EU program services are not subject to the PA 295 statutory energy savings targets, equivalent contractual targets were imposed by the Commission. Since the EU programs did not begin until the end of 2009, the first meaningful annual energy savings results are for the combined 2009/2010 program years: 63,810 MWh of electricity and 309,609 Mcf of natural gas.⁴ Actual savings reported were 66,373 MWh and 380,331 Mcf, or 104 percent and 123 percent of the targets, respectively. Target energy savings for 2011 are 59,171 MWh of electricity and 442,455 Mcf of natural gas. Annual EU utility program budgets range from approximately \$700 to \$3,000,000 for the electric providers and from approximately \$100,000 to \$6,000,000 for the natural gas providers. The total budget for

⁻

⁴ 24,362 MWh (2009 electric target) + 39,448 MWh (2010 electric target) = 63,810 MWh; 88,382 Mcf (2009 gas target) + 221,227 Mcf (2010 gas target) = 309,609 Mcf

Efficiency United from the contract award date in 2009 through December 2011 is \$34,669,263. Detailed information on participating utilities, funding, and energy savings targets can be found in *Appendix E-1 and E-2*.

Low-Income Programs

Sections 71, 89, and 93 of PA 295 require utilities to offer EO programs for each customer class, including low-income residential. Each rate class must contribute proportionally to low-income program costs, based on its funding of the utility's total EO program. Low-income EO programs are excluded from the requirement to meet the cost-benefit test. *Figure 6* and *Table 1* below show the contribution to low-income program costs by Michigan utilities in 2009-11.

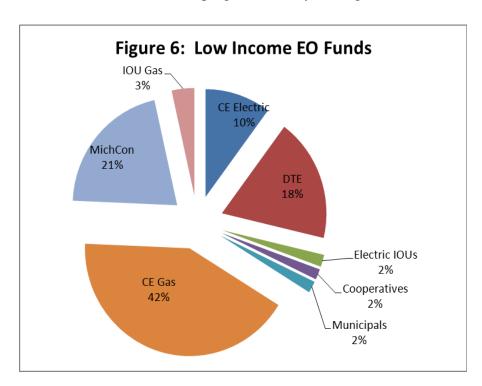

Table 1: Low Income EO Fund Contributions									
CE Electric	\$5,918,889								
DTE	\$10,761,250								
Electric IOUs	\$1,056,804								
Cooperatives	\$921,044								
Municipals	1,017,871								
CE Gas	24,335,558								
MichCon	\$12,110,000								
IOU Gas	2,037,124								
Total	\$58,158,540								

Self-Directed EO Program

Under Section 93 of PA 295, electric customers that meet certain eligibility requirements may create and implement a customized EO plan and thus be exempt from paying an EO surcharge to their utility providers. Electric customer eligibility to participate in the self-directed EO plans is determined by the customer's annual peak demand. For 2012, the Act allows customers with 1 MW annual peak demand in the preceding year, or 5 MW aggregate at all of the customer's sites within a service provider's territory, to participate. These are the same thresholds as 2011, but lower than the 2010 thresholds of 2 MW annual peak demand or 10 MW in aggregate. The number of customers enrolled to self-direct their own EO program has dropped from 77 in 2009 to 47 in 2011.

Reported and projected energy savings for these large commercial and industrial customers are summarized in *Table 2* below.

Table 2: Projected Energy Savings for Large Commercial and Industrial Customers

Provider	2009 Customers	2010 Customers	2011 Customers	2009 reported load reduction (MWh)	2010 reported load reduction (MWh)	2011 expected load reduction (MWh)
Detroit Edison	26	26	13	12,486	18,488	7,834
Consumers	30	30	16	8,515	12,343	5,648
State Administrator	9	11	10	5,196	14,568	21,476
Cooperative	3	3	4	899	1,498	562
Municipal	9	9	4	2,006	3,343	606
Total	77	79	47	29,102	50,240	36,126

Per PA 295, self-directed customers with less than 2 MW annual peak demand per site or 10 MW in aggregate must utilize an approved energy optimization service company (EOSC) to design and implement their EO programs. Following a public hearing, in 2010 the Commission

enacted an approval process, required by PA 295, for EOSCs. The approval process and application can be found on the Commission's website.

Financial Incentive Mechanism

Section 75 of PA 295 allows the Commission to authorize a financial incentive mechanism for providers that exceed the energy savings targets in a given year. On September 29, 2009, the Commission authorized a financial incentive mechanism for Detroit Edison (U-15806), MichCon (U-15890) and Consumers Energy (U-15805 & U-15889) that it believed would incent utilities to pursue cost effective energy efficiency programs that significantly exceed the statutory minimum targets. The incentive mechanism requires a utility to simultaneously meet two thresholds: exceed the statutory minimum targets, and exceed the USRCT benefit-cost test. The incentive payout is computed as a percent of program spending, and is a linear interpolation between the minimums and maximum achievement level of 115 percent of the energy savings target and a USRCT of 1.25. The maximum incentive is capped at 15 percent of program spending. For 2009, Consumers Energy, Detroit Edison, and MichCon were all approved to receive financial incentive payments which were collected, with no interest included, over a 12 month period. For 2010, Consumers Energy, Detroit Edison and MichCon requested an incentive amount for exceeding their minimum targets and exceeding the USRCT. The specific amounts are listed in *Table 3* below:

Table 3: Financial Incentives

Utility:	2009 Actual Incentive:	2010 Requested Incentive:
Consumers Energy (Electric)	\$3,323,612	\$5,076,731
Consumers Energy (Gas)	\$2,361,693	\$3,407,064
Detroit Edison	\$3,008,829	\$6,200,000
Michigan Consolidated Gas	\$913,374	\$2,400,000

For more detailed information, including the financial incentive mechanism nomograph, see **Appendix** F-1-F-3.

Revenue Decoupling

Section 89(6) of PA 295 requires the Commission to establish revenue decoupling mechanisms (RDMs) for regulated gas utilities that implement an Energy Optimization program and that request such a mechanism. A gas utility must file a request for an RDM, although the Commission may authorize an alternative mechanism that it deems to be in the public interest.

Section 97(4) of PA 295 required the Commission to issue a report to the Legislature no later than one year after the effective date of the Act on the potential impacts on all classes of customers if the electric providers whose rates are regulated by the Commission decouple rates. The Commission filed its report with the Legislature on October 6, 2009, finding that electric utility RDMs would be cost effective and would reduce the use of fossil fuels in the state. The Commission determined that it had the ability to approve electric utility RDMs under its general ratemaking authority, and that it would consider electric utility RDMs for any utility that requested one.

On and after November 2, 2009, the Commission approved revenue decoupling mechanisms for seven utilities. Of the approved mechanisms, four are electric utility RDMs: Consumers Energy (Electric), Detroit Edison, Upper Peninsula Power, and Indiana Michigan Power Company. Three RDMs are for gas utilities: Consumers Energy (Gas), Michigan Consolidated Gas, and Michigan Gas Utilities. All RDMs were approved on a pilot basis. Several different mechanisms were approved to obtain experience and information that would enable the Commission to refine the algorithms, annual reconciliation calculation, revenue allocations, and surcharge rate design.

Michigan Saves Grant Program

Michigan Saves was established in June 2009 by a grant from the Low Income and Energy Efficiency Fund administered by the Commission. This grant, awarded to Public Sector Consultants and the Delta Institute, sought to establish a new organization to design and launch an innovative financing program for energy efficiency and small-scale renewable energy technologies. This was a two-year grant which expired on September 30, 2011. During the grant period, Public Sector Consultants accomplished the grant objectives, primarily by incorporating Michigan Saves, Inc., a non-profit energy efficiency financing program for residential and commercial customers.

In 2011, Michigan Saves was able to offer the Home Energy Loan Program throughout the entire state, establish the Michigan Saves Commercial Energy Loan Program, execute the Michigan Saves Home Energy Mortgage Program, and negotiate with lenders to increase loan caps up to \$20,000. Michigan Saves has closed out its grant and transferred to independent nonprofit status.

Statistics in *Table 4* below show project activity through July 2011:

MPSC Energy Optimization Collaborative

In Case Nos. U-15805 and U-15806, the Commission directed the Commission Staff to establish a statewide energy optimization collaborative which required the participation of all gas and electric

providers and offered the opportunity for a variety of additional stakeholders to participate. The structure and goals of the EO collaborative were outlined in the Commission's 2009 report to the Legislature. A key goal reached by the collaborative was the reduction of the extent and cost of the formal contested hearing process through stakeholder consensus and industry peer review of standards and procedures. Program Design and Implementation and Program Evaluation workgroups continued to meet throughout 2011 and the Low-Income Workgroup collaborated with the Coalition to Keep Michigan Warm. These workgroups report to the Collaborative Steering Committee as needed.

Participation in the Steering Committee is by invitation only and includes stakeholders representing gas and electric providers, interveners in EO plan cases, energy efficiency advocates, and others. In early 2011, the Program Design and Implementation and Program Evaluation workgroups decided that the Steering Committee would be most effective in meeting once a year at year end to discuss any issues that remained outstanding from the other workgroups. The 2011 Steering Committee meeting is planned for December 2011. A flow chart of the EO Collaborative workgroup structure is located in *Appendix G*.

Conclusion

The Commission continues to view the Energy Optimization provisions of PA 295 as essential to Michigan's overall energy policy. The Commission believes that EO programs are a critically important component of efforts to improve the state's economy, and is confident that the state's EO programs will continue to improve the competitive position of Michigan businesses and the financial standing of its residents.

Data collected by Commission Staff shows that the state's largest utilities are significantly exceeding energy savings targets, while the majority of smaller utilities are meeting or exceeding targets. The Commission recognizes that the statutory targets will require more

effort on the part of providers to meet as these targets continue to ramp up in future years. In fact, several smaller providers have expressed concern about their ability to achieve these savings targets going forward. To that end, the Commission has used its administrative authority under PA 295 to provide more flexibility to utilities in meeting their savings goals.

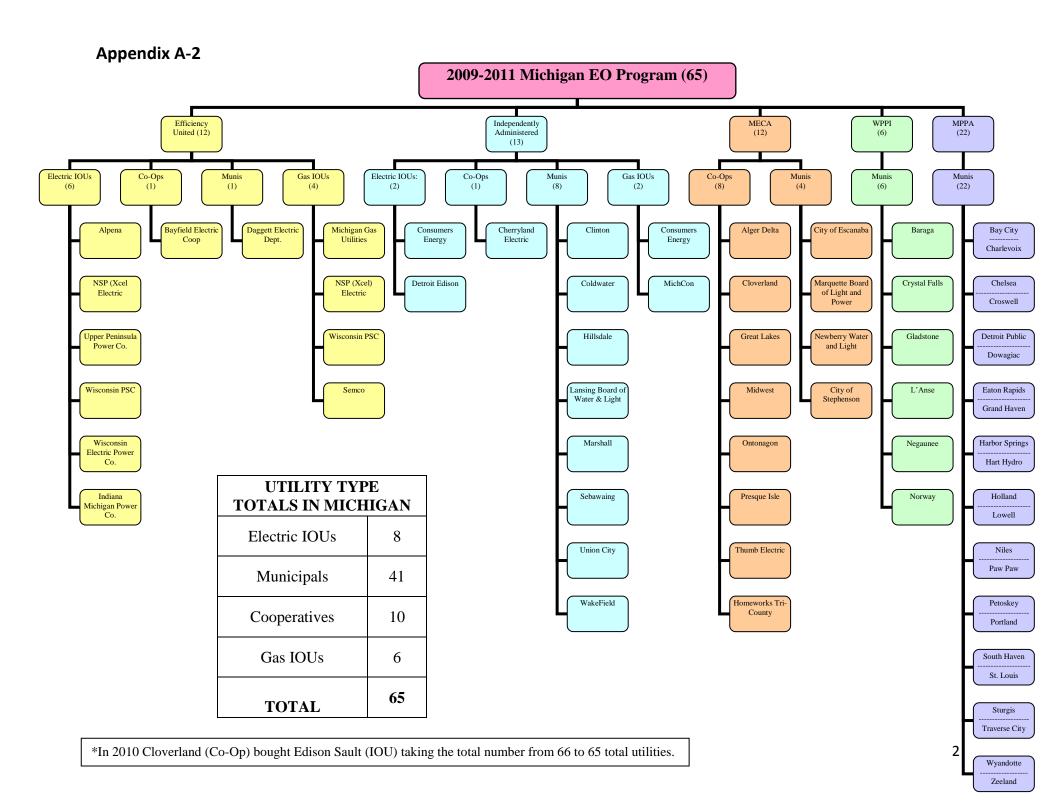

Most notably, on November 10, 2011, in Case No. U-16678, the Commission approved a settlement agreement with the state's electric cooperatives and municipal utilities that collaboratively administer their EO programs through the Michigan Electric Cooperative Association (MECA). In its order approving the settlement agreement, the Commission noted that it was exercising its discretion pursuant to Section 71(3)(h) of PA 295 to allow utilities flexibility in designing their EO programs. Several administrative improvements, including allowing the collaborative to be treated as one provider for purposes of achieving savings targets, allowing EO dollars to flow to the most successful program offerings, and recognizing the potential of unlimited carry-forward of EO savings for self-directed customers, were approved. These changes have broad applicability, and could be useful to other utilities that jointly coordinate EO programming.

In addition to the MECA collaborative model, the Commission is exploring several innovative programs that could help utilities in meeting their energy savings targets, including an enhanced power-factor program, recognition of the value of peak demand reductions associated with energy saving measures, and an alternate EO program for large gas transportation customers which cannot benefit from the traditional rebate/incentive program.

The Commission believes that the goals set by the Legislature to achieve energy savings are valuable and that the state's EO programs will continue to positively benefit residential and business customers of Michigan's utilities. To the extent that there is a desire to provide

additional flexibility to providers in meeting energy savings targets and this ability is not within the Commission's authority, the Commission stands ready to assist the Legislature and stakeholders in finding solutions that provide for the most efficient use of customer dollars going to EO programs and reduction of administrative burden for providers while still meeting the broader energy optimization goals of Public Act 295.
